

100 amp solid state battery isolator

What is the best battery isolation system?

Our solid state Battery Isolator / Combiners, have been the top choice since 1998, when we introduced the World's first all solid state electronic battery isolation system without diode losses.

What is a battery isolator?

A battery isolator is a device that allows two separate batteries to be connected independently to the alternator. This setup enables one battery to power the vehicle while the other powers auxiliary items. Some vehicles that can benefit from a battery isolator include:

What is a solid state battery isolation?

The Solid State Battery Isolators from CARTEK are very small and highly reliable alternatives to the traditional mechanical master-switch and have been designed to overcome all of the problems and restrictions associated with mechanical and...

Can a solid state battery isolator be used as a low voltage protector?

It can be used either as a battery low voltage protector or a battery isolator with manual over-ride. This solid state battery isolator uses the latest MOSFET which have the minimal internal resistance of 2mOhm which translates to a total voltage drop of 0.2V even at full load of 80A. It has an idle current consumption of 0.015A.

What is the difference between argofet Battery isolators?

12/24 Volt auto ranging: Victron Energy Argofet battery isolator will automatically adjust to a 12-Volt or 24-Volt system. In contrast with diode battery isolators, FET isolators have virtually no voltage loss. Voltage drop is less than 0.02-Volt at low current and averages 0.1-Volt at higher currents.

What is the difference between a diode battery isolator and FET?

In contrast with diode battery isolators, FET isolators have virtually no voltage loss. Voltage drop is less than 0.02-Volt at low current and averages 0.1-Volt at higher currents. Discharging the accessory battery for example will not result in also discharging the starter battery.
