How long do solar batteries typically last?

The life expectancy of a solar battery varies depending on usage, typically lasting between five and 15 years. Keep in mind that the average solar PV panel lasts around 20-30 years, so you may need to replace these batteries twice or more during the lifespan of your panels.

What is the lifespan of a solar generator battery?

As you can see, the lifespan of a solar generator battery depends largely on what type of battery is being used to store electrical energy for the system. The Bluetti EP500 has one of the longest-lasting batteries because it stores a massive 5,100Wh LiFePO4 battery rated for 6,000+ lifecycles to 80% capacity.

How often should you run a solar battery?

Running too few or too many cycles can be detrimental to your battery's lifespan. A single cycle per day is a normal rate for a household with solar panels, though if you're on one of the best export tariffs, check with your installer if it'd be more profitable to run two cycles.

How do you measure a battery's lifespan?

If you want a more accurate way of measuring a battery's lifespan, you can track the number of total cycles it's performed- meaning the amount of times it charges up and discharges. The best batteries can usually go through roughly 6,000 cycles in total, and most homes will typically cycle through their battery around once per day.
