

# A record player that can store electricity

Do record players need electricity?

Almost all record players need electricity or power of some kind. The only players that don't require electricity are hand crank players and those use a "horn" for the sound to come out and not speakers. Even all of the old record players require electricity to run! A record player needs electricity for the platter to rotate.

Why should you buy an electric record player?

One of the essential factors is convenience. An electric record player is much more convenient to use than a hand crank one. All you have to do is plug it in and turn it on. You have to manually crank the record player with a hand-crank record player every time you want to play a record. It can be tiring and time-consuming.

Is a record player powered by electricity better than a hand crank?

Many people feel that a record player powered by electricity is better than one that relies on a hand crank. However, there are just as many people who feel the opposite. Some people believe that a hand-crank record player is more authentic and has better sound quality.

Do you need a portable record player?

All you have to do is plug it in and turn it on. You have to manually crank the record player with a hand-crank record player every time you want to play a record. It can be tiring and time-consuming. As for convenience, if you want to listen to your records wherever you go, you'll need a portable turntable.
