What makes a good battery?

A good battery contains calcium lead alloys,demineralised electrolyte,and durable separator materialsas internal components. Our batteries have various applications (automotive starting battery,motorcycle,deep cycle,dual purpose,marine battery,and others) suitable for your needs.

What is the difference between a gel and a sealed battery?

Gel and sealed batteries are both sealed and part of the VRLA family. Gel batteries typically excel in extreme deep cycling applications,while sealed batteries are more suitable for high power applications. However,gel batteries do not perform well in temperatures less than 32°F due to increased impedance from the Gel.

What is an AGM battery?

An AGM battery is a valve regulated lead-acid (VRLA) batterywith its entire amount of electrolyte absorbed in the separator material. The separator acts like a sponge and is saturated to approximately 98%. This is why an AGM battery is spill-proofand can be mounted in virtually any position.
