

Albemarle solid state battery

Does Albemarle have a lithium plant?

Albemarle, the world's largest lithium producer, has other conversion plants underway or planned in China but paused building a \$1.3-billion refinery in South Carolina and partially halted an Australia expansion, with global lithium prices falling, it told investors in mid-November.

Does Albemarle have a competitive edge?

Despite facing pricing fluctuations, Albemarle has leveraged its global operations and vertically integrated structure to maintain a competitive edge. The company's ability to control different stages of the lithium value chain allows it to navigate industry headwinds more effectively than some of its competitors.

How is Albemarle optimizing its portfolio?

Additionally, Albemarle is optimizing its portfolio by shifting its Qinzhou facility's production from hydroxide to carbonate, aligning with market demand. This strategic flexibility gives Albemarle the ability to adapt to evolving market conditions and supply-demand imbalances.
