Is energy storage at a crossroads?

"The Q1 2025 results demonstrate the demand for energy storage in the US to serve a grid with both growing renewables and growing load. However, the industry stands at a crossroads, with potential policy changes threatening to disrupt this momentum," said Allison Weis, Global Head of Energy Storage at Wood Mackenzie.

How many MWh is a residential energy storage system?

The data set totals 263 MWh, and covers all or a portion of installations in 20 states and the District of Columbia. WoodMac estimated that U.S. residential energy storage installations were 540 MWh in 2020, though an exact share of the market is not calculated here due to differences in the data such as when systems are considered installed.

Can energy storage be used in small nonresidential systems?

While this paper focuses on residential energy storage, some of the same ESSs may be used in small nonresidential systems. Nonresidential installations include installations at industrial sites, commercial buildings, nonprofits, government buildings, and similar locations, and do not include utility installations.

What is the future of energy storage?

Renewable penetration and state policies supporting energy storage growth Grid-scale storage continues to dominate the US market, with ERCOT and CAISO making up nearly half of all grid-scale installations over the next five years.

Will energy storage grow in 2024?

Allison Weis, Global Head of Energy Storage at Wood Mackenzie Another record-breaking year is expected for energy storage in the United States (US), with Wood Mackenzie forecasting 45% growth in 2024 after 100% growth from 2022 to 2023.

What's happening in the residential storage market?

The residential storage market also saw significant year-over-year (YoY) growth, installing a record-breaking 458 MW in Q1. California and Puerto Rico accounted for 74% of this growth, while new markets like Illinois are beginning to emerge. The total 5-year utility-scale capacity forecast remains strong.
