

Analysis of the development prospects of energy storage projects

Why is energy storage research important?

It helps the academic and business communities understand the research trends and evolutionary trajectories of different energy storage technologies from a global perspective and provides reference for stakeholders in their layout and selection of energy storage technologies.

Why is investor participation important in the energy storage industry?

Investor participation is beneficial for the development of the energy storage industry. Facing trends, they should keep a cool head in assessing business models to identify high-quality segments and targets.

Are energy storage technologies passed down in a single lineage?

Most technologies are not passed down in a single lineage. The development of energy storage technology (EST) has become an important guarantee for solving the volatility of renewable energy (RE) generation and promoting the transformation of the power system.

What is the implementation plan for the development of new energy storage?

In January 2022, the National Development and Reform Commission and the National Energy Administration jointly issued the Implementation Plan for the Development of New Energy Storage during the 14th Five-Year Plan Period, emphasizing the fundamental role of new energy storage technologies in a new power system.

Why are energy storage technologies important?

They are also strategically important for international competition. KPMG China and the Electric Transportation & Energy Storage Association of the China Electricity Council ('CEC') released the New Energy Storage Technologies Empower Energy Transition report at the 2023 China International Energy Storage Conference.

Is energy storage the future?

The key conclusion of the research is that deployment of energy storage has the potential to increase significantly--reaching at least five times today's capacity by 2050--and storage will likely play an integral role in determining the cost-optimal grid mix of the future.
