

Analysis of the prospects of energy storage integration enterprises

Are energy storage technologies passed down in a single lineage?

Most technologies are not passed down in a single lineage. The development of energy storage technology (EST) has become an important guarantee for solving the volatility of renewable energy (RE) generation and promoting the transformation of the power system.

Why is energy storage research important?

It helps the academic and business communities understand the research trends and evolutionary trajectories of different energy storage technologies from a global perspective and provides reference for stakeholders in their layout and selection of energy storage technologies.

Why are energy storage technologies important?

They are also strategically important for international competition. KPMG China and the Electric Transportation & Energy Storage Association of the China Electricity Council ('CEC') released the New Energy Storage Technologies Empower Energy Transition report at the 2023 China International Energy Storage Conference.

What is the implementation plan for the development of new energy storage?

In January 2022, the National Development and Reform Commission and the National Energy Administration jointly issued the Implementation Plan for the Development of New Energy Storage during the 14th Five-Year Plan Period, emphasizing the fundamental role of new energy storage technologies in a new power system.

What are the benefits of ESS integration?

The investigation also considers factors such as electricity long-term viability, dependability, technical and financial feasibility, and ecological sustainability when evaluating hybrid renewable energy power-producing technologies. Improving dependability and smoothing down power output are two major benefits of ESS integration.

Why is investor participation important in the energy storage industry?

Investor participation is beneficial for the development of the energy storage industry. Facing trends, they should keep a cool head in assessing business models to identify high-quality segments and targets.
