

Armenia water storage

What is the most important reservoir in Armenia?

The most significant reservoir in Armenia is Lake Sevan, which is the largest freshwater lake in the South Caucasus. It serves multiple purposes, including water supply, fisheries, and recreation. Reservoirs are crucial for regulating water supply, especially in arid and semi-arid regions, and for mitigating the impacts of droughts and floods.

How sustainable is water management in Armenia?

Water is an essential resource for economic and social development, but in Armenia its sustainable management is a major challenge. This landlocked country, subject to arid summers, has to cope with a growing demand for water, particularly for its agriculture, which today employs an estimated quarter of the working population.

Does Armenia need a water supply system?

Armenia's water supply and wastewater treatment systems are still outdated and require substantial investments. The high level of non-revenue water of approx. 75% can be considered a major issue within the water supply sector.

Does Armenia have a water security problem?

This report assesses Armenia's current water security and future change drivers, aiming to spotlight issues for enhanced water security. It compiles knowledge, offering an overview of challenges, risks, and opportunities. The focus is on identifying key areas for immediate and future improvements in water security.

What are the major water resources in Armenia?

Water resources. Water resources play a significant role in Armenia's economy, agriculture, and overall development due to its predominantly mountainous terrain and relatively small size. Armenia is home to several rivers and lakes, many of which are important water sources for the country. The two major rivers are the Araks and the Hrazdan.

Why is water pollution a problem in Armenia?

Armenia's water bodies face pressures due to growing water abstractions but also water pollution, requiring implementing effective water quality monitoring systems, improved wastewater treatment, and strengthening regulations and enforcement related to water pollution. The overall economic water productivity in Armenia is well below its potential.
