Can battery storage transform the power system in developing countries?

There has been significant excitement around deployment of grid-connected battery storage around the world including many developing countries. As the cost of battery storage followed the sharp drop in solar and wind, batteries hold immense possibility to transform the power systems in the developing world.

What is the business case for batteries in developing countries?

There is a critical need to systematically analyze the business case for batteries in developing countries. The IFC White Paper provides an excellent foundation for the methodology that needs to be implemented for power systems where there are potentially strong cases, marked by high penetration of renewables and inflexible systems.

How many GW of battery storage capacity are there in the world?

Strong growth occurred for utility-scale battery projects, behind-the-meter batteries, mini-grids and solar home systems for electricity access, adding a total of 42 GW of battery storage capacity globally.

Are batteries the future of energy storage?

Developments in batteries and other energy storage technology have accelerated to a seemingly head-spinning pace recently -- even for the scientists, investors, and business leaders at the forefront of the industry. After all, just two decades ago, batteries were widely believed to be destined for use only in small objects like laptops and watches.

Why are EV batteries becoming more popular around the world?

Strong government support for the rollout of EVs and incentives for battery storage are expanding markets for batteries around the world. China is currently the world's largest market for batteries and accounts for over half of all battery in use in the energy sector today.

What is the role of energy storage in the future?
