

Battery galileo sol

How does the Galileo Sol dive computer work?

The Galileo Sol is a fully loaded dive computer that is surprisingly easy to use. You navigate through the system via three clearly marked buttons. The system can be configured with different screen options to suit individual tastes. The screen can also be rotated 180°; degrees, enabling the dive computer to be worn with the buttons on top or on bottom.

How do I change the battery on my Scubapro / Uwaterc Galileo Luna?

The Battery kit contains all you need to self change the battery in the Scubapro /Uwaterc Galileo Luna and other Galileo family dive computers. This is an easy, dive computer battery to change simply unscrew the cap with the tool provided with the Luna dive computer and replace the battery. Please see full delivery info here

How much is a Uwaterc Galileo TX worth?

If you're willing to wait for shipping, I found the tx on a British site for 182 British pounds here: Uwaterc Galileo Sol Transmitter | Dive Computer Accessories | Deep Blue Dive Exchange rate right now is 1gbp = 1.22 USD so it should be \$222.04USD if I did the math right.

Scubapro 3 Volt Lithium Battery for Uwaterc Galileo SOL & Terra Diving Computers is backordered and will ship as soon as it is back in stock.
