How does a loop inverter work?

POWER APPLIANCE & MACHINERY DIRECTLY FROM THE SUN | Power generated by the solar panels passes through the LOOP inverter system directly to your appliances & machinery, drastically reducing your requirement to buy expensive power from the grid.

Why is closed-loop communication important to solar battery storage?

Closed-loop communication is crucial for solar battery storage as it enables the inverter to receive and confirm real-time information from the battery. This is achieved by ensuring that batteries and inverters 'speak the same language', usually through an RJ45 ethernet cable.

Do I need a solar battery to join origin loop?

A compatible solar battery and inverter system is required to access Origin Loop. Join more than 100,000 energy savers in shifting your energy usage habits and be rewarded for doing so. What do I need to join? Any eligible digital meter, the Origin app and an Origin electricity account.

What makes a solar energy system safer with closed-loop communication?

When the battery is able to send real-time data to the inverter, your solar energy system will be safer, more intelligent, more efficient, and more reliable. Closed-loop communication represents the future of solar storage, and it's time for the entire industry to get on board.

Do batteries use open-loop communication?

Most batteries on the market still use open-loop communication. For example, when you connect a battery to an inverter, the inverter can only see and measure voltage. It receives no other information about the battery's state.

Is closed-loop communication the future of solar energy?

Closed-loop communication represents the future of solar storage. When the battery is able to send real-time data to the inverter, your solar energy system will be safer, more intelligent, more efficient, and more reliable.
