What is California's Solar Rebate program?

Rebate amount: Up to \$1,000 per kWh. Savings: Can cover nearly 100% of the battery system cost--making storage essentially free for many qualifying families. Starting June 2, 2025, California is rolling out a new \$280 million incentive specifically for low-income residents installing paired solar and battery systems:

Are solar batteries cheap in California?

Solar batteries also qualify for the federal solar tax credit, so battery installations in California are about as cheap as they come. California's Self-Generation Incentive Program (SGIP) is a tiered rate structure incentive that provides rebates statewide for battery storage projects based on the capacity of the battery installed.

How much does a solar battery rebate cost in California?

The value of the rebate ranges from \$150 to \$200 per kWh of storage capacity installed, depending on where you are located. A typical solar battery will earn a rebate of \$1,500 to \$2,000! Solar batteries also qualify for the federal solar tax credit, so battery installations in California are about as cheap as they come.

Does California offer a SGIP rebate for home battery storage?

Home battery storage is crucial for backup storage and maximum solar savings in California -- and the Self-Generation Incentive Program (SGIP) rebate is designed to help lower the cost. With fresh funding in 2024, a majority of Californians are eligible for a \$1,500 SGIP rebate when they install an average-sized battery (10 kWh).

How much does a solar rebate cover?

This rebate may cover 15 percent to 100 percent of the installation. Installation includes battery storage, or solar and battery storage for residential customers only. Funding will vary by budget for specific program eligibility.
