

# Battery tender green light flashing won't go solid

Why does my battery tender keep flashing?

If the green light on the battery tender keeps flashing and never turns solid green, it may indicate that the battery is charging, but the charger is not drawing enough power from the power source. This usually happens for various reasons, including faulty outlets, wiring, and loose connection.

Why does my battery tender turn green?

If the connection is secure, but the battery tender continues flashing green and never turns solid green, it may be time to replace the battery charger. If the battery tender green light stays on, it indicates that the battery is fully charged, and you can unplug the charger. However, you can also leave the battery connected to the tender.

Why is my battery flashing red and green?

This usually happens when the battery is too hot or too cold when you plug the charger in. If the red flashing light transforms to green and red lights simultaneously, it indicates an underlying problem. But, if the flashing red light stops and the green light starts flashing, the battery is charging.

What does a flashing green light on a battery tender mean?

A flashing green light on a Battery Tender typically indicates a specific charge status of the battery. It's important to note that this signal usually signifies that the battery is more than 80% charged. This condition means that the Battery Tender has detected a sufficient charge level, and the battery is nearing full capacity.

Why does my battery tender flash a yellow light?

If the battery tender flashes a yellow light, it indicates that the charger or the battery itself is defective. If the yellow light continues flashing rapidly, then the charger is not getting enough power from the power source. On the other hand, if the yellow light remains solid, the charger is not connected correctly to the battery.

Why are my lights flashing red to Green?

If the lights on your unit are flashing from red to green, we first recommend double-checking the unit on a known good battery. A good example of this is the battery in your everyday vehicle. If the unit goes through the cycle charge while connected to your everyday vehicle, then we suggest getting the battery that wasn't working checked out.

If the green light on the battery tender keeps flashing and never turns solid green, it may indicate that the battery is charging, but the charger is not drawing enough power from the power source.

I checked the tender's connection with the battery and confirmed it was properly connected and current was flowing. Any ideas why I can't seem to get a full charge with a solid ...
