MIT researchers have developed an inexpensive "air-breathing" battery, with sulfur anode, that could store electricity for long durations with minimal location restraints and zero emissions to make sporadic renewable ...

Researchers at this week's meeting of the American Chemical Society described their work on a "breathing" battery that could replace the standard lithium-ion batteries. The ...

This "breathing" flow battery's most powerful benefit is that it has a low installation cost, according to the researchers. This makes it ideal for long-term storage that is needed by electrical grids.

"The state of the art is to use a solar panel to capture the light, and then use a cheap battery to store the energy," Wu says. "We've integrated both functions into one device.

In this work, we demonstrate an ambient-temperature, air-breathing, aqueous polysulfide flow battery that exploits sulfur's intrinsic advantages, and show using techno-economic analyses that such an ...
