

What types of hydraulic accumulators are available at hydraulic Megastore?

At Hydraulic Megastore, we offer a wide range of high-quality hydraulic accumulators, including popular types like bladder accumulators and piston accumulators, designed to meet the needs of various industrial and mobile hydraulic applications.

What is a hydraulic accumulator?

A hydraulic accumulator is a pressure storage reservoir in which a hydraulic fluid is held under pressure by an external source such as a spring, compressed gas, or a piston. The accumulator stores energy and releases it when the system demands, helping to balance pressure fluctuations and reduce pump cycling.

What is a HYDAC bladder accumulator?

The HYDAC standard bladder accumulators, models SB330/400/500/550, consist of a pressure vessel, a flexible bladder with a gas valve, and a hydraulic connection with a check valve. The pressure vessels are seamless and manufactured from high-tensile steel.

What is a HYDAC SK standard hydraulic cylinder accumulator?

The Hydac SK Standard Hydraulic Piston Accumulators offer reliable energy storage with volumes from 0.2 to 600 litres and pressure ratings up to 350 bar. Featuring a finely machined cylinder, lightweight floating piston, and customizable sealing systems, they are ideal for diverse hydraulic applications.

What is a HYDAC SB pulsation damper?

The HYDAC SB Pulsation Damper (1-32 L, 330-1,000 bar) effectively reduces pressure fluctuations and flow irregularities in high-pressure hydraulic systems, with a High-Flow version supporting up to 30 L/s. Designed to prevent pipe fatigue, protect sensitive components, and lower noise levels, it enhances system reliability and extends service life.
