Can energy storage capacity be allocated in wind and solar energy storage systems?

This article studies the allocation of energy storage capacity considering electricity prices and on-site consumption of new energy in wind and solar energy storage systems. A nested two-layer optimization model is constructed, and the following conclusions are drawn:

What is energy storage planning standard?

When configuring the energy storage capacity of the system, the energy storage configuration results of the typical day with the highest demand are considered the energy storage planning standard of the system.

Does energy storage affect power generation capacity planning?

Barrera-Santana et al. studied the capacity planning scheme of an island power system, discussed in detail different energy composite patterns such as renewable energy, energy storage, electric vehicles, and HVDC transmission, and concluded that energy storage has an important impact on power generation capacity planning and operation.

Should energy storage system be charged while supplying electricity?

If it is within the power supply capacity of the interconnection line, the external power grid should consider charging the energy storage system while supplying electricity; When it is less than zero or greater than zero and less than , this situation mainly relies on the energy storage system to maintain the balance of .

How does demand response affect energy storage capacity allocation?

As an important and flexible adjustment method, demand response has been introduced into the research of optimal allocation of energy storage. Kou et al. proposed to reduce the capacity allocation of energy storage by stimulating demand response, which improved the economy of grid-connected system.

Which energy storage configuration scale is the largest?

Figure 4 and Table 3 show the optimization solution results under different seasonal scenarios. From this, it can be concluded that the energy storage capacity configuration scale in summer is the largest, reaching 1194 kW·h, and the energy storage configuration power in spring is the largest, reaching 210 kW.
