What does a hydraulic accumulator do?

Hydraulic accumulators store pressurized hydraulic fluid and release it as needed to maintain steady pump flow and pressure, dampen vibrations and shocks, and compensate for leaks or thermal expansion in the system. They can also accommodate for lost pressure if the system's pump fails or there is fluid loss in the system.

What are hydraulic accumulator charging and gauging kits?

Hydraulic accumulator charging and gauging kits are used to charge and monitor the pressure in hydraulic accumulators. Hydraulic accumulator safety blocks include shut-off and discharge valves to separate the accumulator from the hydraulic system for maintenance or in an emergency.

What are hydraulic accumulator safety blocks?

Hydraulic accumulator safety blocks include shut-off and discharge valves to separate the accumulator from the hydraulic system for maintenance or in an emergency. A hydraulic accumulator from Grainger can save energy and improve efficiency by helping supplement pump flow, absorb shock and compensate for leakage.

What is a Parker hydraulic accumulator?

Parker's range of hydraulic accumulators deliver precise regulation and are designed to regulate the performance of bespoke hydraulic systems.

What are accumulators used for?

Cap. 1 gal. 2 1/2 gal. 5 gal. These accumulators come with a charge of nitrogen and are ready to use. They help a system maintain a constant pressure during pump failure. Mount accumulators within 25° of vertical. UN/UNF (SAE Straight) thread connections have straight threads and are also known as O-ring Boss fittings.

How do you charge an accumulator?

Use a charging and gauging kit to increase or decrease an accumulator's charge. For technical drawings and 3-D models, click on a part number. Cap. Max. Flow Max. Ht. Ht. 1 gal. 2 1/2 gal. 5 gal. Charge these accumulators to the pressure you need, and they will help a system maintain a constant pressure during pump failure.
