

Zhejiang University Hydrogen Energy Institute To promote interdisciplinary teaching and research innovation in the hydrogen energy field, ...

With the new energy law, development of the Chinese hydrogen sector is expected to gain pace between 2026 and 2030. (See ICIS Hydrogen Topic Page for details) ...

Therefore, this review compares the hydrogen energy roadmaps and strategies of different countries, provides an overview of the current status and technological bottlenecks of ...

China has become a global force in advanced energy solutions deployments. Here we showcase the strides it's making in energy storage and ...

Solid-state hydrogen storage technology has emerged as a disruptive solution to the "last mile" challenge in large-scale hydrogen energy applications, garnering significant ...

Overall, the performance of hydrogen supply chains varies significantly under different conditions. Establishing a unified energy-economic-environmental evaluation ...

However, this type of methods often come across issues of slow discharge process and low hydrogen purity due to by-products. To address the issues associated with the main physical ...

This study proposes a multiobjective optimization for a hybrid hydrogen-battery energy storage system based on hierarchical control and ...

China has become a global force in advanced energy solutions deployments. Here we showcase the strides it's making in energy storage and clean hydrogen.

For hydrogen storage and transportation, compressed gaseous hydrogen is expected to dominate the Chinese market in the near term, with ongoing R& D efforts on in-creasing the working ...

The green hydrogen chemical industry is integral to achieving carbon neutrality in China's chemical industry. The lack of systematic and in-depth potential assessment is the ...

Energy storage is one of the hot points of research in electrical power engineering as it is essential in power systems. It can improve power system stability, shorten energy ...

China's goal to reach carbon neutrality by 2060 has driven significant investments in renewable energy.

However, the fundamental fluctuation of wind and solar ...

China International Energy Storage Expo and Conference (CIES 2025) will take place from March 23-26, 2025, at the Hangzhou International Expo Center in Hangzhou, ...

Four suggestions for hydrogen storage and transportation technology and safe and efficient hydrogen power generation technology in China were proposed to provide references for ...

China Petroleum and Chemical Corp, also known as Sinopec, has been actively advancing its hydrogen energy infrastructure, having built 11 hydrogen fuel cell supply centers ...

This review paper delves into the advancements in hydrogen (H<sub>2</sub>) storage technology, a key area in the quest for sustainable energy ...

Foreword Stepping up efforts to develop new energy storage technologies is critical in driving renewable energy adoption, achieving China's 30/60 carbon goals, and establishing a new ...

**ABSTRACT** As a clean, efficient energy source, hydrogen is regarded as a promising alternative energy for accomplishing the zero-CO<sub>2</sub> targets. In the longer term, large-scale hydrogen ...

The largest project currently under construction in China is the China Electric New Energy (Huai'an) hydrogen energy storage power station, ...

As China takes faster steps to achieve green development, hydrogen plays a key role in process of transitioning the energy mix and ...

The coal chemical sector uses coal to produce chemicals and emits substantial greenhouse gases, which are hard to abate by electrification alone. Deploying green H<sub>2</sub> for ...

China launches hydrogen pilot projects to boost production and use by 2035 The initiative includes 11 categories of pilot projects, spanning ...

This study utilises the optimization method to ascertain the levelized cost of hydrogen and life cycle carbon emissions of four water electrolysis hydrogen production ...

**Abstract** This study investigated the large-scale hydrogen storage in several forms of underground space (depleted gas reservoirs, aquifers, hard rock caverns, and salt ...

Prior to this timeframe, hydrogen production through industry by-products emerges as a viable alternative for the development of hydrogen energy.

On completion, the project will be the largest green hydrogen production and consumption base in China, supporting operations along the whole hydrogen supply chain, ...

Hydrogen energy storage is one of the most popular chemical energy storage [5]. Hydrogen is storable, transportable, highly versatile, efficient, and clean energy carrier [42]. It also has a ...

This paper comprehensively describes the advantages and disadvantages of hydrogen energy in modern power systems, for its production, storage, and applications. The ...

Abstract China's manufacturing prowess and progress in lowering electrolyzer costs have raised hopes - and concerns - about its potential to lead electrolyzer manufacturing and exports ...

Hydrogen is a clean, efficient and high-quality energy carrier with im-mense potential in various sectors, including transportation, industry, buildings and power generation. Poised to play a ...

The sector has progressed significantly since the first publication of the Global Hydrogen Review in 2021. Low-emissions hydrogen production projects have gone from just a handful of ...

Solid-state hydrogen storage technology has emerged as a disruptive solution to the "last mile" challenge in large-scale hydrogen energy ...
