

China has set a new global benchmark. The Asian country installed an unprecedented 93 gigawatts (GW) of solar power capacity in May 2025.

As a new Trump administration signals a retreat on climate action, China is stepping up. China is the biggest producer of climate technologies like electric vehicles and ...

China is building 510 gigawatts of utility-scale solar and wind projects, according to data from the Global Energy Monitor, a non-governmental organisation based in San Francisco.

6 &#0183; LONGi, Jinko Solar, Trina Solar and JA Solar posted combined net losses of nearly RMB11 billion (US\$1.54 billion) in H1 2025.

If China's "spare" solar capacity were put to use, they argued, it would enable the world to meet the goal -- agreed at the COP28 summit -- of tripling renewable generation ...

China's solar growth has been particularly rapid during the past decade. Between 2017 and 2023, the country's operational solar capacity surged by an average of 39,994 megawatts per year. The solar capacity of the United ...

China's pioneering role in solar energy China's pivotal role in solar energy expansion is underscored by its massive investment and robust government support. Leading the world in solar production, China hosts ...

Starting from a base of 100 MW of solar capacity in 2009, China has seen consistent increases in annual deployments, reaching its 1st TW level cumulatively halfway ...

5 &#0183; China's aspiration to be a global leader in clean-energy production received a major boost in 2025 after it sharply expanded its solar capacity, installing more gigawatts in one ...

Between March 2023 and March 2024, China installed more solar than it had in the previous three years combined, and more than the rest of the world combined for 2023.

As the Trump administration's "big, beautiful bill" eliminates many clean-energy incentives in the U.S., China continues huge investments in wind and solar power, reportedly ...

China has achieved a milestone in renewable energy transition, with wind and solar generating 26% of the nation's electricity in April 2025.

# China solar

China raced ahead building renewable energy last year, installing more wind and solar power than ever before and continuing to leave all other countries in the dust.

Record Growth in PV Installations: In 2023, China installed 216.3 GW of new PV capacity, a remarkable 147.5% year-on-year increase, bringing its total cumulative capacity to 609 GW. ...

Support CleanTechnica's work through a Substack subscription or on Stripe. Utility-scale solar power capacity in China reached more than 880 gigawatts (GW) in 2024, ...

As a new Trump administration signals a retreat on climate action, China is stepping up. China is the biggest producer of climate technologies like electric vehicles and solar panels.

In China, more wind turbines and solar panels were installed last year than in the rest of the world combined. And China's clean energy boom is going global.

China has more utility-scale solar than any other country. The 277 GW of utility-scale solar capacity installed in China in 2024 alone is more than twice as much as the 121 ...

China's cumulative installed solar power capacity surpassed 1 TW in May after nearly 200 GW of new solar plants came online in the first five months of the year, according to ...

Clean-energy growth helped China's CO2 emissions fall by 1% in first half of 2025, extending a declining trend that started in March 2024.

China sets a new solar installation record, leading the world in renewable energy. Explore the groundbreaking achievements and future potential!

China's cumulative installed solar power capacity surpassed 1 TW in May after nearly 200 GW of new solar plants came online in the first five months of the year, according to official data released by the National Energy ...

China is advancing a nearly 1.3 terawatt (TW) pipeline of utility-scale solar and wind capacity, leading the global effort in renewable energy buildout. This is in addition to China's already ...

An international agency reports that the installation of renewable energy worldwide hit a record high last year, with 92.5% of all new electricity brought online coming from the sun, wind or other clean sources.

Bloomberg Opinion's climate columnist visited Michigan, the former heart of the solar industry, and China to learn how good, old-fashioned capitalism won out.

What happened in the past year? China added almost twice as much utility-scale solar and wind power

capacity in 2023 than in any other year. By the first quarter of 2024, China's total utility-scale solar and wind capacity ...

China is building as much clean energy capacity over four years as it had promised to build in 10 years, but continues to add coal-fired power plants.

Amid a record amount of new solar capacity added in China in 2024, the share held by small-scale, &quot;distributed&quot; arrays fell to 38%, from 58% in 2022. Grid constraints, policy changes, and pricing adjustments have impacted ...

The Solar Surge That Redefined Energy Benchmarks In May 2025, China installed an unprecedented 92.92 GW of solar photovoltaic (PV) capacity in just one month. To ...

China installed enough solar and wind power between January and May to match the total electricity use of countries like Indonesia or Turkey, even as its clean energy ...

China's new solar power capacity will slow in the second half of 2025 as reforms removing guaranteed pricing create uncertainty for new projects, though full-year additions will ...

China's solar cell output soared to a record in March as policy-driven, rush installations boosted demand along the supply chain, a development that goes against the ...

4 &#0183; China is on track to set a new record for solar power installations in 2024, driven by falling production costs and increased global interest in renewable energy, said industry ...
