Question: Capacitors are our most common energy-storage element in a circuit, storing energy in the electric field and changing some of the time-based behavior of a circuit.

Statement (First-order LTI Circuit) A first-order LTI circuit is an LTI circuit that has one independent energy-storage element. Capacitors and inductors are energy-storage elements.

The article provides an overview of electrical circuit components, covering power sources, switches, and passive elements such as resistors, capacitors, and inductors.

The circuit of one energy-storage element is called a first-order circuit. It can be described by an inhomogeneous linear first-order differential equation as 2.
