Are underground thermal energy storage systems sustainable?

The study aims to explore the potential of Underground Thermal Energy Storage (UTES) systems, including Aquifer Thermal Energy Storage (ATES) and Borehole Thermal Energy Storage (BTES), as sustainable solutions for managing energy supply and demand.

What is geothermal energy storage?

Geothermal Energy Storage is explored as a key strategy for large-scale storage of renewable energy. Effective or improved energy conservation is essential as energy needs rise. There has been a rise in interest in using thermal energy storage (TES) systems because they can solve energy challenges affordably and sustainably in various contexts.

Can geothermal energy storage be used in large-scale energy storage?

The Geothermal Energy Storage concept has been put forward as a possibility to store renewable energy on a large scale. The paper discusses the potential of UTES in large-scale energy storage and its integration with geothermal power plants despite the need for specific geological formations and high initial costs.

What is a cave thermal energy storage system?

An open system that makes use of the groundwater's thermal capacity by pumping it underground and then injecting it again; this system can be further divided into Cave Thermal Energy Storage (CTES) and Aquifer Thermal Energy Storage (ATES) the latter of which makes use of large hollowed-out caverns or pits, mines, buried tanks .

What is thermal energy storage?

Thermal energy storage (TES) As the energy demand continues to climb, using more effective energy conservation methods is essential. Applications of TES system technologies have been demonstrated to offer solutions to energy issues on a global scale that are both economically viable and friendly to the environment .

How is thermal energy stored in boreholes?

The storage of thermal energy in boreholes is accomplished by using vertical heat exchangers buried anywhere from 20 to 300 m below the earth's surface. This facilitates the flow of heat energy into and out of the ground (clay, rock, sand, etc.) .
