Will additional storage technologies be added?

Additional storage technologies will be added as representative cost and performance metrics are verified. The interactive figure below presents results on the total installed ESS cost ranges by technology, year, power capacity (MW), and duration (hr).

What is a battery energy storage system (BESS)?

**CASE DESCRIPTION** This case consists of a utility-scale, lithium-ion, battery energy storage system (BESS) with a 150 MW power rating and 600 MWh energy rating; the system can provide 150 MW of power for a four-hour duration.

Is a solar PV project a capital expense?

The final annual expense is the land lease. Solar PV projects typically rent, rather than purchase, the land for the project; therefore, it is an operating expense and not a capital cost.

What are EPC fees?

EPC fees are applied to the sum of direct and indirect costs. 2. Owner's costs include project development, studies, permitting, legal, owner's project management, owner's engineering, and owner's start-up and commissioning costs. Other owner's costs include electrical interconnection costs, gas interconnection costs, and land acquisition costs.

What is the Electricity Market Module?

The Electricity Market Module is a submodule within the EIA's National Energy Modeling System, a computer-based energy supply modeling system used for the EIA's Annual Energy Outlook and other analyses.

What are the costs of energy generation?

These expenses may include water consumption, waste and wastewater discharge, chemicals such as selective catalytic reduction ammonia, and consumables including lubricants and calibration gas. Because these costs are generation dependent, the values are levelized by the cost per unit of energy generation and presented in \$/MWh.
