Can hybrid solar photovoltaic-electrical energy storage be used in residential buildings?

The energy management strategies of the PV-BESS were constrained to only residential buildings. The research on hybrid solar photovoltaic-electrical energy storage was categorized by mechanical, electrochemical and electric storage types and analyzed concerning the technical, economic and environmental performances.

What happens if PV power is less than the user's demand?

Furthermore, its basic principle is that when the PV power is greater than the user's demand, the remaining PV power is first stored in the battery and then the remaining power is output to the grid. When the PV generation is less than the user's demand, the battery is discharged first to meet the user's demand.
