

Community solar kwh of electricity

How does a community solar project work?

Imagine your share of a community solar project produces 600 kWh of energy in one month. On the next utility bill, you would receive credit for the 600 kWh of electricity. If your total consumption was 800 kWh that month, you would only need to pay the utility company for the remaining 200 kWh of electricity.

How many MW is community solar?

The amount of community solar (measured in megawatts) more than doubled, on average, each year between 2010 and 2021. About 1800 MW came online in 2021 alone. What is Community Solar? Community solar allows multiple customers, or "subscribers", to purchase the output from a single solar photovoltaic array.

How does community solar make money?

Community solar makes its money by selling the electricity produced by the shared solar installation to its participants, who, in turn, pay for their share of the energy through subscriptions or ownership agreements. If you're new to community solar and are curious about what it is and how it works, read on in our comprehensive explainer guide.

What are the benefits of community solar?

Community solar offers several benefits, including saving on monthly bills, especially in places with high electricity costs and abundant sunshine. The concept of sharing a solar array brings many other benefits, both technical and economic. These include:

Is a community solar project right for You?

A community solar project creates savings for you, local jobs, and a cleaner environment for the whole community. But, some community solar projects may be better suited to meet your energy goals than others. Community solar options vary from state to state and utility to utility.

Who are the subscribers of a community solar project?

The subscribers are the individuals, businesses, nonprofits, or local governments, that purchase a share of the electricity generated by the community solar project. A community solar project is not located at the house or business where the subscribers use electricity.

Typically, it's multiplied by the number of kilowatt-hours (kWh) your share of the community solar system generates. In most cases, you'll receive two bills each month: one from your utility and ...
