Can energy storage be a strategic investment under competition?

These market dynamics serve as a motivation for this study to understand strategic investments in energy storage under competition, taking into account storage impact on the market price. Our work uses energy arbitrage as a test case with the intent to explore additional services in the future.

Does market competition affect storage investment?

Cournot competition is widely used in electricity markets to study suppliers' strategic behaviors , , , , , . However, none of these works studied market competition in storage investment.

Should investors invest in energy storage technology?

For those who decide to invest, limited and declining revenue prospects could lead to competing strategies of energy storage investment and operation, where investors opt for technologies with specific technical attributes in the competitive market.

Do storage investors compete in deregulated electricity markets?

In practice, storage investors usually compete in deregulated electricity markets in a non-cooperative manner, a setting that is more challenging to model and analyze. Qin et al. studied strategic storage investment among non-cooperative investors. This work is most closely related to ours. Our work differs from in several crucial ways.

Can multiple energy storage investors invest in heterogeneous storage technologies?

Our work studies the strategic investment behavior among multiple energy storage investors in CAISO. These investors can choose to invest in heterogeneous storage technologies. At the beginning of an investment horizon, each investor decides the invested energy and power capacities.

How can energy storage investors secure long-term revenue certainty?

Investors can undertake to secure long-term revenue certainty. Arrangements with route-to-market providers allow energy storage investors to de-risk the complex trading optimization of battery dispatch by outsourcing battery trading operations. In some arrangements, investors can secure
