

Can a composite energy system be used for residential energy storage?

Currently, the application and optimization of residential energy storage have focused mostly on batteries, with little consideration given to other forms of energy storage. Based on the load characteristics of users, this paper proposes a composite energy system that applies solar, electric, thermal and other types of energy.

Can energy storage equipment improve the economic and environment of residential energy systems?

It is concluded that this kind of energy storage equipment can enhance the economics and environment of residential energy systems. The thermal energy storage system (TESS) has the shortest payback period (7.84 years), and the CO₂ emissions are the lowest.

What are the characteristics of energy storage systems?

The characteristics of energy storage systems (ESSs), which have a wide application range, flexible dispatch ability and high grid friendliness, compensate for the shortage of microgrid technology, and have a positive impact on the application and promotion of ESSs [16].

What equipment is used in a residential energy system?

Figure 4 shows the equipment composition and energy flow structure of the residential energy system in this study. PVs and batteries are the main power supply equipment, while heat pumps and heat storage tanks are the main heating equipment.

What is home energy storage?

Home energy storage refers to residential energy storage devices that store electrical energy locally for later consumption. Usually, electricity is stored in lithium-ion rechargeable batteries, controlled by intelligent software to handle charging and discharging cycles. Companies are also developing smaller flow battery technology for home use.

Should energy storage devices be added?

Adding energy storage devices can improve the performance of the PVs and thermal electric pumps in the system, stabilize the system, enhance user economics, and balance grid loads. The TOU scheme for the target households and the special tariff data are presented in Table 3 [33].
