

Con edison kwh solar returns

Why is Con Edison charging me for solar panels?

Solar panels can offset your overall energy consumption, but they typically do not reduce your monthly demand. Demand charges cover Con Edison's cost to maintain our facilities to meet our customers' maximum energy needs. I got solar panels so I'd never have to pay another Con Edison bill ever again. Why are you still billing me?

Can I sell solar power back to Con Edison?

You can sell your extra solar power back to Con Edison, earning private solar generation credits. Your electricity generated by your solar panel travels through the supply panel to provide power to your lights and appliances. The supply panel is connected to your Con Edison meter.

How can ConEd help customers switch to solar energy?

By simplifying this process and providing substantial incentives, ConEd is making it easier than ever for customers to switch to solar energy. Switching to renewable energy can be a daunting process, but CleanChoice Energy makes it easy for customers to take the leap.

Does Con Edison cash out the solar 'bank' at the end of the year?

For Con Edison customers who are not small residential, there is no cashing out of the solar 'bank' at the end of the year. Instead, these credits apply to future usage (SC-2). For SC-8 and SC-9 customers, the excess energy generated is converted to dollars and applied against remaining billing items such as demand charges.

Does Con Edison offer a level payment plan?

No, Con Edison does not offer a level payment plan. Under the Level Payment Plan, Con Edison calculates an average monthly payment based on your billing history, allowing you to spread your energy costs evenly over the year.

What is Con Edison's solar program?

Con Edison follows the Standardized Interconnection Requirements (SIR) for New York State and makes a distinction between solar panel systems greater than and less than 50 kW. Most residential systems fall under the less than 25 kW category.

The combination of federal and utility incentives can offset up to 80% of costs associated with solar array installations in Con Edison's service territory. High energy prices ...

Con Edison homeowners who switch to solar can earn \$0.20 per watt, or \$200 per kW, of solar installed on their roof. That's a rebate of about \$1,200 for the average-sized solar system.

The actual amount of energy generated by the system at any given time depends on both the availability and
