

The aqueous Zn-ion battery (ZIBs) is regarded as the most promising alternative energy storage system. However, the poor shelf life and restoration capacity caused by ...

1. Wen-Duo Yang, Rong-Da Zhao (\*), Fang-Yu Guo (\*), Jun Xiang, Sroerb Loy, Liang Liu, Jia-Yu Dai, Fu-Fa Wu. Interface engineering of hybrid ZnCo<sub>2</sub>O<sub>4</sub>@Ni<sub>2.5</sub>Mo<sub>6</sub>S<sub>6.7</sub> structures for flexible ...

Fundamentally, the findings elucidate that the solvent acts as an “ionophobic agent” to induce a substantial enhancement in charge storage, and as an “ion traffic police” to eliminate ...

:Precisely modulating the structural stability and redox potential of sodium layered cathodes through the synergetic effect of co-doping strategy:Chen Cheng, Haolv Hu, Cheng Yuan, ...

Herein, to elucidate the effect of solvent on energy storage of supercapacitors based on c-MOF electrodes and IL electrolytes, we conducted constant-potential MD simulations with ...

Fast and selective lithium-ion transport is crucial for advancing solid-state electrolytes in lithium metal batteries. While porous materials with tun...

Electrochemical systems, such as fuel cell and water splitting devices, represent some of the most efficient and environmentally friendly ...

Structural and compositional design is reported for the fabrication of nickel cobalt bimetallic phosphide (NiCo-P) nanocages with ultrahigh capacity for fast energy storage. ...

Low-cost hydrocarbon membrane enables commercial-scale flow batteries for long-duration energy storage Future terawatt-scale deployment of flow batteries will require substantial ...

Understanding of Li-plating on graphite electrode: detection, quantification and mechanism revelation Energy Storage Materials ( IF 18.9 ) Pub Date : 2021-06-13, DOI: ...

Metal oxides and carbon-based materials are the most promising electrode materials for a wide range of low-cost and highly efficient energy storage and conversion ...

Crossref View in Scopus Google Scholar [22] M. Liang, L. Wang, V. Presser, X. Dai, F. Yu, J. Ma Combining battery-type and pseudocapacitive charge storage in Ag/Ti<sub>3</sub>C<sub>2</sub> ...

The oxygen vacancies in Ni-O V -C@GO lower the reaction activation energy, thus providing superior hydrogen storage kinetics. Meanwhile, previous experiments have ...

ncorporating the organic solvent into pure IL on the energy storage of c-MOF supercapacitors. Employing constant potential MD simulations, we revealed a striking enhancement in both ...

Owing to the rapid development of commercial electronic devices and electric vehicles, lithium-ion batteries (LIBs) have been widely applied for energy conversion and ...

Ultimately, a desirable energy density of 90.3 J/cm<sup>3</sup> with efficiency of 62.3% was achieved. It suggests that strain can serve as a practical means to modulate the energy ...

Rechargeable batteries play an important part in modern society for the management of electrical energy. Most of recent investigations are mainly focusing on non ...

Designing electrodes with hybrid structures is significant for improving energy storage and conversion efficiency. Overall, single-component metal oxides suffer from poor working stability ...

Low-cost hydrocarbon membrane enables commercial-scale flow batteries for long-duration energy storage  
Flow batteries are promising for long-duration grid-scale energy storage. ...

Flexible perovskite-based single-junction and tandem solar cells have achieved power conversion efficiencies (PCEs) exceeding 25% and 29%, respectively...

Growing emphasis on environmental protection highlights an urgent need for electrochemical energy storage solutions that are environmentally sustainable [1]. ...

Introduction Sodium-ion batteries (SIBs) have recently received widespread attention as promising candidates for large-scale electric energy storage (EES) by virtue of the ...

The development of diverse electrochemical energy storage technologies has emerged as a pressing imperative to address the demands of modern industrial growth and ...

?Central South University; Massachusetts Institute of Technology (MIT)? - ??:41,271 ?? - ?Zn batteries? - ?Lithium ion batteries? - ?Sodium ion batteries?

Chen Cheng, Haolv Hu, Cheng Yuan, Xiao Xia, Jing Mao, Kehua Dai, Liang Zhang. Precisely modulating the structural stability and redox potential of sodium layered ...

1. Introduction Sodium-ion batteries (SIBs) are the most competitive candidates for the application of grid-scale energy storage due to abundant sodium resource, cost ...

Most phase change materials employed in latent heat thermal energy storage suffer from poor thermal conductivity both in liquid and solid phases, leading to ...

The development of conversion-typed anodes with ultrafast charging and large energy storage is quite challenging due to the sluggish ions/electrons transfer kinetics in bulk ...

Abstract Rechargeable aqueous Zinc-ion batteries (ZIBs) are regarded as the promising battery chemistry in stationary grid energy storage applications. Exploration of new ...

Layered Li-rich Mn-based oxide cathode materials (LRMO) have attracted extensive attention because of their high energy density. However, the poor cyc...

The binding energy can reflect the strength of the molecular interaction at the interface between the two gels. [39], [40], [41] Further, the binding energy of the C-PAM ...
