How do you calculate a 12V deep cycle solar battery?

To do so, you will calculate that number by dividing the watt-hours by the volts. Assuming you are planning to run 12V solar panels and 12V batteries, you would divide your 1,000Wh by 12V to get a total of 83Ah. So, in this example, a 100Ah 12V deep cycle solar battery would be able to meet your storage requirements.
