Is the vanadium market poised for shifts this year?

Written by Georgia Williams for Investing News Network -> The vanadium market is poised for shifts this year driven by a projected rise in demand from energy storage and steel sectors.

What percentage of steel is vanadium demand?

If you want to look worldwide, you can say that steel in general is something like 90 percent [vanadium demand]," Sardain said in a December interview with the Investing News Network. The principal analyst went on to point out that quantifying the amount of vanadium used in batteries and energy storage is challenging to tally.

Will vanadium supply increase in 2022-2030?

With steel still dominating vanadium demand (accounting for 94% of US consumption in 2023), this surge in battery use is expected to put significant pressure on supply. To meet this growing demand, global vanadium supply will need to increase by 6.9% annually between 2022-2030.

Are VRFBs a major source of new demand for vanadium?

Many vanadium industry stakeholders see VRFBs as a major source of new demand for the metal that has traditionally been used in steel alloys," states Mikhail Nikomarov, Chairman of the Vanitec Energy Storage Committee (ESC) and CEO of Bushveld Energy.

Are vanadium redox flow batteries the future of energy storage?

Energy storage systems that utilize vanadium redox flow batteries (VRFBs) are gaining traction as renewable energy deployment accelerates, boosting demand for high-purity vanadium. However, global supply remains constrained due to limited mining projects and geopolitical uncertainties, particularly in China and Russia, key producers.

Will vanadium demand increase by 2050?

According to the World Bank report " Minerals for Climate Action: The Mineral Intensity of the Clean Energy Transition " vanadium demand could increase by 200% by 2050. Without any significant new supply coming online CRU analysis expects the vanadium market to be in deficit after 2025.
