Why are energy storage systems important?

Energy storage systems (ESSs) can help make the most of the opportunities and mitigate the potential challenges. Hence, the installed capacity of ESSs is rapidly increasing, both in front-of-the-meter and behind-the-meter (BTM), accelerated by recent deep reductions in ESS costs.

What is behind the meter storage?

As discussed earlier, behind the meter (BTM) refers to the electrical system on the consumer side of the power meter. Energy storage solutions in BTM applications have been used for many years as a standby power source in the case of power loss. Historically, lead-based batteries were the battery of

Do prosumers need ESS metering?

Under Gross/net metering, for example, the sell rate is set equal to the retail electricity prices, so prosumers have no reason to install ESS and incur installation and maintenance costs, unless utilities impose limits on authorized hours and the amount of energy sold to the grid.

Should energy storage be included in the electric grid?

Integrating storage in the electric grid, especially in areas with high energy demand, will allow clean energy to be available when and where it is most needed. As New York continues to invest and build a cleaner grid, energy storage will allow us to use existing resources more efficiently and phase out the dirtiest power plants.

Can prosumers use the energy they have stored in the grid?

Ideally, this concept may enable prosumers to use the energy they have stored in the grid at any time. However, given the grid in its present form, electricity cannot be stored on a large scale for an extended period and must generally be consumed as soon as it is generated.

How will energy storage affect New York's energy grid?

In June 2024, New York's Public Service Commission expanded the goal to 6,000 MW by 2030. Storage will increase the resilience and efficiency of New York's grid, which will be 100% carbon-free electricity by 2040. Additionally, energy storage can stabilize supply during peak electric usage and help keep critical systems online during an outage.
