What is EMSA guidance on battery energy storage systems (BESS) on-board ships?

The EMSA Guidance on the Safety of Battery Energy Storage Systems (BESS) On-board Ships aims at supporting maritime administrations and the industry by promoting a uniform implementation of the essential safety requirements for batteries on-board of ships.

What is containerized energy storage?

ABB's containerized energy storage solution is a complete, self-contained battery solution for a large-scale marine energy storage. The batteries and all control, interface, and auxiliary equipment are delivered in a single shipping container for simple installation on board any vessel. How does containerized energy storage work?

How does a maritime energy storage system work?

The maritime energy storage system stores energy when demand is low, and delivers it back when demand increases, enhancing the performance of the vessel's power plant. The flow of energy is controlled by ABB's dynamic Energy Storage Control System.

What is a BESS energy storage system?

Detailed configuration of BESS The design of the ship's energy storage system is based on detailed power load calculations and integrates a comprehensive battery box design. The system consists of two battery packs, each containing six battery arrays with a cumulative energy capacity of 254.016 kWh.

What type of battery is used in a ship's energy storage system?

The individual cell, as the fundamental unit within the energy storage system, is crucial for operational efficiency. Considering cost, battery energy density, and supply cycle, the ship's energy storage system utilizes a CCS-certified lithium iron phosphate battery. Specific parameters of this battery are detailed in Table 2. Table 2.

How much power does a 14000 TEU container ship need?

Consider a 14000 teu New Panamax container ship, a common size in trans-oceanic shipping. The power required to propel the ship at a design speed of 21.5 knots is 40.09 MW. At a reduced slow steaming speed of 16 knots, the required power is 16.38 MW assuming a cubic power curve for frictional resistance.
