What is the Technology Strategy assessment on thermal energy storage?

This technology strategy assessment on thermal energy storage, released as part of the Long-Duration Storage Shot, contains the findings from the Storage Innovations (SI) 2030 strategic initiative.

What are the three types of thermal energy storage?

Three different thermal energy storage principles can be observed: sensible heat storage, latent heat storage, and thermochemical heat storage. These technologies store energy at a wide spectrum of temperatures, for different temporal ranges, and are able to meet a variety of energy system needs. 2. Latent Energy Storage 1. Sensible Energy Heat

What is thermal energy storage?

Thermal energy storage in buildings can be used to adjust the timing of electricity demand to better match intermittent supply and to satisfy distribution constraints. TES for building heating and cooling applications predominantly utilizes sensible and latent heat technologies at low temperatures (i.e., near room temperature).

Why is thermal energy storage synchronized with electric arc furnace operation?

The continuous heat availability from the energy storage unit is a very restrictive boundary, leading to an accurate synchronization of the thermal energy storage charge/discharge procedure with the electric arc furnace operation.

How does thermochemical heat storage work?

Thermochemical heat storage (TCS) operates in two ways: chemical reactions and sorption processes. In the former, energy is stored as the heat of reaction of reversible reactions. The latter stores thermal energy either through adsorption (physical bonding) or absorption (uptake/dissolution of a material).

What is a packed bed thermal energy storage system?

5. Summary and conclusions A packed bed thermal energy storage system has been proposed for waste heat recovery in a steel production plant from the exhaust gases of an electric arc furnace. The main objective of this system is to achieve a continuous heat supply from the inherent batch operation of the steel furnace.
