What is a draft Emergency Response Plan for energy storage facilities?

This Draft Emergency Response Plan for energy storage facilities, presented by the American Clean Power Association (ACP), is the result of a collaborative member effort initially undertaken by the Energy Storage Association (ESA) in 2019 and continued following ESA's merger with ACP at the beginning of 2022.

How should energy storage equipment be protected?

Access to energy storage equipment should be firmly restricted, with sites and/or enclosures secured against very robust attempts at ingress. However, contact information for 24-hour response should be provided to ensure quick access, should first-responders need access in the event of an emergency situation.

What's new in energy storage safety?

Since the publication of the first Energy Storage Safety Strategic Plan in 2014, there have been introductions of new technologies, new use cases, and new codes, standards, regulations, and testing methods. Additionally, failures in deployed energy storage systems (ESS) have led to new emergency response best practices.

How do you ensure energy storage safety?

Ultimately, energy storage safety is ensured through engineering quality and application of safety practices to the entire energy storage system. Design and planning to prevent emergencies, and to improve any necessary response, is crucial.

What are the three pillars of energy storage safety?

A framework is provided for evaluating issues in emerging electrochemical energy storage technologies. The report concludes with the identification of priorities for advancement of the three pillars of energy storage safety: 1) science-based safety validation, 2) incident preparedness and response, 3) codes and standards.

Should thermal protection be included in energy storage systems?

Thermal protections should account not only for chemical thermal runaway events that begin within an energy storage system, but also for external sources of heat - from environmental heat of a hot summer day in an enclosed container in direct sun to wildfires encroaching on a site.
