

# Energy storage battery insulation test voltage requirements

What voltage is used in battery insulation resistance testing?

The test voltage is the voltage that the insulation tester applies to the cell under test. The appropriate test voltage varies from battery to battery. DC voltage of 100 V to 200 V is generally applied in battery cell insulation resistance testing. Recently, it has become more common to use a low voltage such as 5 V or 50 V.

How to test battery cell insulation resistance?

Battery cell insulation resistance testing is generally carried out as follows (\*1): DC voltage is applied between each cell's anode and cathode, and the insulation resistance is measured. DC voltage is applied between each cell's electrodes and enclosure, and the insulation resistance is measured.

What are the requirements for energy storage insulation monitoring?

Table 1-1. Requirements for Voltage, Current, Temperature, Insulation Resistance Accuracy in GB/T34131 Creepage distances and electrical clearances are also important areas of focus in the design of energy storage insulation monitoring.

What is insulation resistance testing of lithium-ion batteries?

Insulation resistance measurement serves as an important test for detecting defects on lithium-ion battery (LIB) cell production lines. Structurally, it's necessary to keep the anode and cathode, as well as the electrodes and enclosure (case), insulated from each other.

What is insulation voltage testing?

Take 1500V BMS as an example, insulation voltage testing refers to following four places(1234) shall withstand 1500V DC voltage Lasts one minute and the insulation resistance value shall not be less than 10M?. Between the battery-connected acquisition terminal and the ground terminal. Between the communication terminal and the earth terminal.

Does GB/T 34131 require a dielectric strength test?

GB/T 34131 also requires insulation voltage tests and dielectric strength test. Take 1500V BMS as an example, insulation voltage testing refers to following four places(1234) shall withstand 1500V DC voltage Lasts one minute and the insulation resistance value shall not be less than 10M?.
