

Energy storage for hydrogen vehicles

What is hydrogen storage?

Hydrogen storage is used to store electric energy and feed hydrogen consumers. The methodology adopted here is expressed as a multi-objective formulation to be solved.

Can hydrogen be used to drive a car?

Without efficient storage systems, the using of hydrogen to drive motor vehicles will be difficult to achieve. The physical storage density limits of compressed and liquid hydrogen have been more or less reached, whilst there is still potential in the development of various hydrogen storage materials.

How much hydrogen is needed for a light vehicle?

Considering that 5 kg of hydrogen is necessary to ensure the light vehicle's mileage in the 400-600 km range, the tank should have a capacity of 0.18 m³. The efficiency of energy storage in compressed hydrogen is about 94% and can be compared with the efficiency of energy storage in batteries, which is 75%.

How is hydrogen used in the automotive industry?

Most of the development work focused on the powertrain and its integration into the vehicle. Currently, one of the key technologies that determines the development of the automotive industry are on-board hydrogen storage systems. Without efficient storage systems, the using of hydrogen to drive motor vehicles will be difficult to achieve.

Can hydrogen be stored on a motor vehicle?

The low energy density per unit volume of hydrogen makes storing and transporting gas a significant research and technical challenge. Consequently, storing hydrogen on a motor vehicle is a key technology enabling the development of hydrogen and fuel cell technologies [3,4]. Figure 1.

Can a hydrogen-powered vehicle reach 500 km?

Hydrogen storage is a key technology enabling the development of hydrogen-powered vehicles. However, storing enough hydrogen on board to achieve a range of 500 km is a significant challenge.

IDTechEx Research Article: The future of energy could be increasingly streamlined, sustainable, and efficient, with battery developments and the integration of ...

A major obstacle for the development of hydrogen powered fuel cell vehicles is the lack of safe, light weight and energy efficient means for on-board hydrogen storage. During ...

This paper studied the safety requirements of the GTR13 compressed hydrogen storage system, analyzed the current hydrogen storage ...
