Does air-cooling improve battery thermal management system?

The air-cooling system is of great significance in the battery thermal management system because of its simple structure and low cost. This study analyses the thermal performance and optimizes the thermal management system of a 1540 kWh containerized energy storage battery system using CFD techniques.

What is battery thermal management system (BTMS)?

Therefore, the design of an efficient and rational Battery Thermal Management System (BTMS) to regulate the maximum temperature and temperature uniformity of the battery pack in high-temperature environments is particularly essential.

Can CFD simulation be used in containerized energy storage battery system?

Therefore, we analyzed the airflow organization and battery surface temperature distribution of a 1540 kWh containerized energy storage battery system using CFD simulation technology. Initially, we validated the feasibility of the simulation method by comparing experimental results with numerical ones.
