How much does the energy storage system cost?

The energy storage system is a 4MW,32MWh NaS battery consisting of 80 modules,each weighing 3 600 kg. The total cost of the battery system was USD 25 millionand included USD 10 million for construction of the building to house the batteries (built by Burns &McDonnell) and the new substation at Alamito Creek.

Why are electric vehicles used for energy storage?

Electric vehicles are used for energy storage in residential energy management systems as well as in business models that aggregate the storage capacity of thousands of them to enter energy markets. In either case, information systems within the automobile can provide information on trips, driving patterns, and battery conditions.

What are energy storage technologies?
