

Thermal energy storage can contribute to the reduction of carbon emissions, motivating the applications in aerospace, construction, textiles and so on. Phase change materials have been ...

In an era of rapid technological advancement, industries ranging from energy storage to aerospace require materials that can withstand extreme conditions while delivering ...

The supercapacitors featured high capacity retention (96%) after 10,000 cycles. These results show that ACFs made of viscose fibers, previously impregnated ...

These results demonstrate the outstanding electrochemical properties of viscose-based activated carbon fibers for use as electrode materials in energy storage devices such as ...

In this review, we discuss the research progress regarding carbon fibers and their hybrid materials applied to various energy storage devices (Scheme 1). Aiming to uncover ...

PDF | In this work, viscose fiber with antibacterial and phase change energy storage was made by microcapsule technology and wet spinning.

Fabrics are often used as freestanding substrates for energy storage devices owing to their hierarchical porous structure and excellent mechanical flexibility. However, it is ...

In this work, viscose fiber with antibacterial and phase change energy storage was made by microcapsule technology and wet spinning. Graphene oxide was ...

In this work, viscose fiber with antibacterial and phase change energy storage was made by microcapsule technology and wet spinning. Graphene oxide was used to enhance the thermal ...

The invention discloses a phase change energy storage viscose fiber and a production process thereof, belonging to the technical field of temperature adjustment fiber production.

Active carbon fibers (ACFs) with a large specific surface area (SSA) have received widespread attention in various fields, such as environmental treatment and energy ...

These results show that ACFs made of viscose fibers, previously impregnated with DAHP, can be used as high-performance electrodes in supercapacitors for energy storage applications.

The supercapacitors featured high capacity retention (96%) after 10,000 cycles. These results show that ACFs

made of viscose fibers, previously impregnated with DAHP, can be used as ...

Regenerated cellulose fibers are a highly adaptable biomaterial with numerous medical applications owing to their inherent biocompatibility, ...

A phase-change energy storage, viscose fiber technology, applied in viscose-made rayon, heat exchange materials, chemical instruments and methods, etc. Influence of thermal function, ...

In this paper, a viscose fiber with antibacterial and phase change energy storage functions was successfully prepared by microcapsule ...

These results demonstrate the outstanding electrochemical properties of viscose-based activated carbon fibers for use as electrode materials in energy storage devices ...

These results show that ACFs made of viscose fibers, previously impregnated with DAHP, can be used as high-performance electrodes in supercapacitors for energy storage ...

The total energy of twined yarns is in equilibrium, although each of the twisted viscose fibers is in a high energy state and each PET fiber is in a relatively low energy state.

It has the function of high storage and high heat release; Good skin friendliness, excellent moisture absorption and breathability, and good moisture absorption ...

Regenerated cellulose fibers are a highly adaptable biomaterial with numerous medical applications owing to their inherent biocompatibility, biodegradability, and robust ...

In addition, lyocell fiber, as an innovative man-made cellulose fiber, boasts more eco-friendly and energy-efficient production processes compared to conventional viscose ...

Here, we propose a Chinese ink-coated viscose fiber composite (Ink@VF), suitable for direct applications in evaporation-driven electricity generators (EEGs) and solar-driven steam ...

The study highlights biomass-based TPU/PLA conjugate fibers as multifunctional artificial muscle fibers with energy harvesting and energy storage capabilities, operating on the ...

The structure of a viscose fiber tow. spinneret head consisting of 25000 holes (51 mm) ... Lignin is sold as a granular product that is easier to use as a source of biochar in energy storage ...

Article "Preparation and characterization of graphene antibacterial phase change energy storage viscose fibers"; Detailed information of the J-GLOBAL is an information service managed by the ...

# Energy storage viscose fiber

Abstract In this work, viscose fiber with antibacterial and phase change energy storage was made by microcapsule technology and wet spinning. Graphene oxide was used to enhance the ...

Energy storage and conservation are receiving increased attention due to rising global energy demands. Therefore, the development of energy storage materials is crucial. ...

Weavable coaxial phase change fibers concentrating thermal energy storage, photothermal conversion and thermo-chromic responsiveness toward smart thermoregulatory ...

Due to the characteristics of high energy storage efficiency, large energy storage capacity and constant phase change temperature, organic phase change materials have been ...

At present, the research on adsorptive hydrogen storage materials mostly focus on the pressure conditions of 30-300 bar, while the atmospheric hydrogen storage performance of adsorptive ...

Despite this limitation, their low decomposition temperature enables them to form carbon fibers under certain high-temperature conditions. Viscose-derived carbon fibers ...

After that, researchers began to apply microcapsule PCMs to wet spinning of viscose fiber, acrylic fiber, and other fibers and then extended it ...
