What does ETA mean on a watch?

No, it's not an acronym for "Estimated Time of Arrival". To put it simply, ETA is Switzerland's biggest and leading movement maker. This company creates the nervous system of your watch, most especially your Swiss luxury watch. Brands such as Tudor, TAG Heuer, Omega, and Frédérique Constant mainly use an ETA movement or ETA-based movements.

Are ETA movements any good?

I have great confidence in any future ETA movements that I purchase as well as the one currently in my vintage watch. Eta was a middle of the range movement manufacturer the 2789 has been used by Tudor, Jenny and other firms, it is a very decent quality movement.

Who makes Eta watches?

ETA SA Manufacture Horlogère Suisse-- simply known to many as ETA -- provides and supplies movements to various watch brands. The company produces quartz movements, hand-wound and self-winding mechanical movements as well as ébauches. Ébauche, in horology, refers to unassembled or partially assembled parts of a movement.

Are ETA movements still a force to be reckoned with?

While not everyone recognises the greatness of ETA movements, they will surely remain a force to be reckoned with. Want to learn more watch terms? Check out our guides on Sapphire Crystal and COSC Certification!

Are modern ETA movements better than the old ETA 2824?

The movement you have has obvious similarities to the modern ETA 2824 so structurally, it's part of the way there already. Nevertheless, modern ETA movements are even better than the old ones. One reason for that is that ETA has to help quite a few others in the Swatch group along too, most notably Omega.

Why do ETA watches have a lower tolerance range?

ETA responded by lowering the tolerance range of their machinery by an order of magnitude (= factor 10) and this increased precision now benefits the ETA movements too. I bought a standard watch with a standard ETA 2824-2 movement nearly ten years ago and it could have attained the chronometre grade even though it was of the lower quality grade.
