

European energy storage project map

What is the European energy storage inventory?

From pv magazine Germany The European Commission has officially launched the European Energy Storage Inventory, a real-time dashboard for energy storage. The goal is to list all planned and operational energy storage projects in Europe by location and technology. The dashboard can be filtered by country, project status and technology.

How many energy storage projects are there in Europe?

The goal is to list all planned and operational energy storage projects in Europe by location and technology. The dashboard can be filtered by country, project status and technology. It lists 32 countries and is led by Germany, with 472 projects. It is followed by the United Kingdom (455 projects), Spain (147 projects) and Italy (112 projects).

How to track thermal energy storage projects in Europe?

With the Interactive Thermal Energy Storage Maps some projects with thermal energy storage in Europe can be tracked. There are several factors to consider when analyzing the market opportunities of the Thermal Energy Storage. Some of them are the maturity of the technologies, its costs, and the application fields and region.

What's new in the CO₂ storage projects in Europe map?

We have published an updated version of the CO₂ Storage Projects in Europe map. The new edition reflects the growing momentum behind carbon capture and storage (CCS) as a key climate mitigation tool. The map includes:

What are EU energy storage initiatives?

European Union EU energy storage initiatives are key for energy security and the transition toward a carbon-neutral economy, improving energy efficiency, and integrating more renewable energy sources into electricity systems.

The interactive Hydrogen Infrastructure map brings together the hydrogen perspective and projects of Transmission System Operators (TSOs) of gas, Distribution System Operators ...

The European Energy Storage Inventory, developed by the Joint Research Centre (JRC) of the European Commission, is a new interactive platform that maps and analyzes over 1771 energy ...

The main energy storage method in the EU is by far "pumped hydro" storage, but battery storage projects are rising. A variety of new technologies to store energy are also ...

Energy transition CCS can be applied to gas-fired power plants which provide flexibility to an electricity grid with a higher share of intermittent renewables.

The fleet of energy storage projects in Europe, including both pumped hydro and battery energy storage systems of all sizes, is expanding rapidly. This growth is set to continue ...

The European Energy Storage Inventory is the first of its kind at European level to show all forms of clean energy storage solutions. Unlike existing databases that focus on ...

Battery Energy Storage Systems (BESS) are key to integrating variable renewable energy sources like solar and wind. This report examines the factors influencing ...

The European Energy Storage Inventory comprises operational, under construction, permitted, and announced energy storage projects across ...

The EU is transforming the RE sector, improving grid efficiency with Battery Energy Storage projects. Watch out for these BES projects in 2023.

It offers a comprehensive view of the continent's storage infrastructure--from pumped hydro and battery systems to emerging technologies like hydrogen and thermal storage.

21.9 GWh of battery energy storage systems (BESS) was installed in Europe in 2024, marking the eleventh consecutive year of record breaking-installations, and bringing ...

Get access to our list of the most important European renewable energy developers that realize battery storage projects (like Enso Energy, ...

Die Europäische Kommission hat offiziell das „European Energy Storage Inventory“ gestartet, ein Echtzeit-Dashboard für Energiespeicher. Das ...

The European Market Outlook for Battery Storage 2025-2029 analyses the state of battery energy storage systems (BESS) across Europe, based on data up to 2024 and ...

The European Commission has recently launched a stakeholder consultation on its upcoming guidance regarding grid connections in situations where capacity ...

Energy-storage technologies have rapidly developed under the impetus of carbon-neutrality goals, gradually becoming a crucial support for driving the ...

Whether it's battery storage, hydropower, hydrogen, or thermal energy, this tool helps you visualize the exact capacity and status of energy storage projects across Europe.

We have published an updated version of the CO2 Storage Projects in Europe map. The new edition reflects

the growing momentum behind carbon capture ...

The current version (V0.1) of the Pan-European Atlas SGC provides a first version of the CO₂ storage potential (to be reviewed at 2026), and favourable areas for of deep geothermal ...

The goal is to list all planned and operational energy storage projects in Europe by location and technology. The dashboard can be filtered ...

Disclaimer: The European Energy Inventory Storage dataset is mainly based on public data and data from Wood Mackenzie. Wood Mackenzie Limited, subject to any additional data ...

According to the European Commission, the European Energy Inventory Storage dataset is mainly based on public data and data from Wood ...

Interactive map Search our global database to learn about innovative lead battery solutions Full Case Study Project Summary Advanced Map Sort Lead Batteries The Complete Energy ...

Within European R& D& I funding, the place of projects aimed at innovation in the field of energy storage is most prominent. There are many ...

The European Commission has recently launched a stakeholder consultation on its upcoming guidance regarding grid connections in situations where capacity constraints exist. In ...

Netherlands-based developer Giga Storage has obtained the irrevocable permit for the construction of a 600 MW/2,400 MWh battery energy storage system (BESS) project in ...

Read more 25.07.2025 Factsheet & Infographic Updated European CO₂ Storage Projects Map Carbon Capture and Storage (CCS) is a proven, safe and reliable technology ...

Within European R& D& I funding, the place of projects aimed at innovation in the field of energy storage is most prominent. There are many opportunities for those seeking ...

Europe has seen its first year when energy storage deployments by power capacity exceeded 10GW in 2023, according to consultancy LCP Delta.

The map includes: 52 announced CCS projects across 13 European countries A projected CO₂ injection capacity of 126 Mt/year by 2030, with contributions ...

Notably, the UK accounts for more than half the project pipeline by capacity - Germany has nearly as many projects planned, but smaller ...

European energy storage project map

The European Energy Storage Inventory is the first of its kind at European level to show all forms of clean energy storage solutions. Unlike ...

Explore how Europe's BESS landscape is transforming with significant developments in battery storage capacity. Learn about the key players and countries leading ...
