

European power outages benefit energy storage

Does Europe need energy storage?

Europe needs energy storage, and fast. Factories depend on uninterrupted power. So do logistics hubs, data centers, and food processing plants. Even a 30-minute outage can cause: BESS shields industrial operations. With the right system, a facility can switch to stored energy instantly during a blackout. No downtime. No losses.

Does Europe need a long-duration energy storage system?

Europe's transition requires more than short bursts of power and unquestionably in the Mediterranean countries. We need systems that store energy for hours or even days. Long-duration storage ensures factories can operate through night shifts and cloudy spells. And it's gaining traction.

How many battery energy storage systems were installed in Europe in 2024?

21.9 GWh of battery energy storage systems (BESS) was installed in Europe in 2024, marking the eleventh consecutive year of record breaking installations, and bringing Europe's total battery fleet to 61.1 GWh. However, the annual growth rate slowed down to 15% in 2024, after three consecutive years of doubling newly added capacity.

Why is battery storage so important in Europe?

The recent electricity outage in the Iberian Peninsula is a stark reminder of why this is important." The BESS market in Europe is set to grow faster in the next years, although not at the levels required. In the most-likely scenario for 2025, 29.7 GWh of battery storage will be installed in Europe, representing a 36% annual growth.

Is the battery storage age just beginning in Europe?

Walburga Hemetsberger, CEO of SolarPower Europe (she/her), said: "If Europe has already entered the solar age, the battery storage age is just beginning. With solar energy mainstreaming across the continent, now is the time for European decisionmakers to put batteries at the centre of a flexible, electrified, energy system.
