

High-end industrial and commercial energy storage system cooperation model

What is the expansion planning model of integrated power generation and user-end energy storage?

Chen S et al. [10] propose an expansion planning model of integrated power generation and user-end energy storage system, and the expansion and operation of the energy storage system are based on the goal of reducing the total cost of the power system.

What is the planning model for industrial and commercial user-side energy storage?

Based on this, a planning model of industrial and commercial user-side energy storage considering uncertainty and multi-market joint operation is proposed. Firstly, the total cost of the user-side energy storage system in the whole life cycle is taken as the upper-layer objective function, including investment cost, operation, and maintenance cost.

What is a user-side energy storage planning and operation simulation?

In the industrial and commercial user-side energy storage planning and operation simulation, the analysis will be based on the IEEE 30-node system, as shown in Figure 1. The electrical load on the industrial and commercial user side will also change with time. User load can be divided according to seasonal changes.
