What is high-temperature thermal storage (HTTs)?

High-temperature thermal storage (HTTS), particularly when integrated with steam-driven power plants, offers a solution to balance temporal mismatches between the energy supply and demand. However,...

What is high-temperature thermal energy storage (httes) heat-to-electricity (CSP)?

High-temperature thermal energy storage (HTTES) heat-to-electricity TES applications are currently associated with CSP deployments for power generation. TES with CSP has been deployed in the Southwestern United States with rich solar resources and has proved its value to the electric grid.

What is high temperature thermal energy storage?

Of all components, thermal storage is a key component. However, it is also one of the less developed. Only a few plants in the world have tested high temperature thermal energy storage systems. In this context, high temperature is considered when storage is performed between 120 and 600 °C.

Why is high-temperature storage important?

High-temperature storage offers similar benefits to low-temperature storage (e.g. providing flexibility and lowering costs). However, high-temperature storage is especially useful for smart electrification of heating and cooling in industry, given that many industrial processes either require high temperatures or produce high-temperature heat.

What is concentrated solar thermal power generation?

Concentrated solar thermal power generation is becoming a very attractive renewable energy production system among all the different renewable options, as it has a better potential for dispatchability. This dispatchability is inevitably linked with an efficient and cost-effective thermal storage system.

What is thermal energy storage?

Thermal energy storage in buildings can be used to adjust the timing of electricity demand to better match intermittent supply and to satisfy distribution constraints. TES for building heating and cooling applications predominantly utilizes sensible and latent heat technologies at low temperatures (i.e., near room temperature).
