

How do companies in the energy storage field conduct business

How do business models of energy storage work?

Building upon both strands of work, we propose to characterize business models of energy storage as the combination of an application of storage with the revenue stream earned from the operation and the market role of the investor.

What are the business models for large energy storage systems?

The business models for large energy storage systems like PHS and CAES are changing. Their role is traditionally to support the energy system, where large amounts of baseload capacity cannot deliver enough flexibility to respond to changes in demand during the day.

Why should you invest in energy storage?

Investment in energy storage can enable them to meet the contracted amount of electricity more accurately and avoid penalties charged for deviations. Revenue streams are decisive to distinguish business models when one application applies to the same market role multiple times.

Is energy storage a new business opportunity?

With the rise of intermittent renewables, energy storage is needed to maintain balance between demand and supply. With a changing role for storage in the energy system, new business opportunities for energy storage will arise and players are preparing to seize these new business opportunities.

Will energy storage become a new business line?

Energy storage will become a new business line in the energy world. The energy transition is changing the energy landscape. New players have entered the industry, operating renewable energy generation capacity, while taking away sales from traditional utilities. Consumers have started to produce energy themselves, leading to lower demand.

How do energy stakeholders prepare for the energy transition?

Energy stakeholders need to prepare today to capture the business opportunities in energy storage and develop their own business models. In the energy transition, new players offering intermittent power supply have disrupted the old business models of utilities. The rise of storage technology will again lead to a shift in the industry.
