How much does compressed air energy storage cost?

Our base case for Compressed Air Energy Storage costs require a 26c/kWh storage spread to generate a 10% IRR at a \$1,350/kW CAES facility, with 63% round-trip efficiency, charging and discharging 365 days per year.

What is the cost of energy storage at 140 °C?

Specifically, at the thermal storage temperature of 140 °C, round-trip efficiencies of compressed air energy storage and compressed carbon dioxide energy storage are 59.48 % and 65.16 % respectively, with costs of \$11.54 /kWh and \$13.45 /kWh, and payback periods of 11.86 years and 12.57 years respectively.

What is compressed air energy storage (CAES)?

What opportunities? Compressed Air Energy Storage (CAES) seeks to smooth out power grids, using excess electricity to compress air into storage tanks or underground reservoirs at high pressures (e.g., 40-80 bar). The energy needed to compress air to different temperatures is plotted below.

What is the difference between compressed air and compressed carbon dioxide energy storage?

Compared to compressed air energy storage system, compressed carbon dioxide energy storage system has 9.55 % higher round-trip efficiency, 16.55 % higher cost, and 6 % longer payback period. At other thermal storage temperatures, similar phenomena can be observed for these two systems.

What are the different types of compressed air energy storage systems?

To enhance the efficiency and reduce the fossil fuels, researchers have proposed various CAES systems, such as the adiabatic compressed air energy storage (A-CAES), isothermal compressed air energy storage (I-CAES), and supercritical compressed air energy storage (SC-CAES).

What is an example of a compressed air energy storage plant?

The 290 MW/2h Huntorf power station in 1978 and the 110 MW/26 h McIntosh power station in 1991 are examples of traditional compressed air energy storage plants. Their efficiencies are 42 % and 53 % respectively. The sliding-pressure range of the gas storage facility from approximately 4.6 to 7.5 MPa.
