

# How to calculate the cost of electrochemical energy storage capacity

Why is electrochemical energy storage so expensive?

The inherent physical and chemical properties of batteries make electrochemical energy storage systems suffer from reduced lifetime and energy loss during charging and discharging. These problems cause battery life curtailment and energy loss, which in turn increase the total cost of electrochemical energy storage.

What is electrochemical energy storage?

Keywords: Electrochemical energy storage &#183; Life-cycle cost &#183; Lifetime decay &#183; Discharge depth 1 Introduction Electrochemical energy storage is widely used in power systems due to its advantages of high specific energy, good cycle performance and environmental protection .

What are the operation and maintenance costs of electrochemical energy storage systems?

The operation and maintenance costs of electrochemical energy storage systems are the labor, operation and inspection, and maintenance costs to ensure that the energy storage system can be put into normal operation, as well as the replacement costs of battery fluids and wear and tear device , which can be expressed as:

How much electricity does a energy storage system cost?

Assuming that the system is used for daily cycling on the power generation side, even after 15 years of use, the total cost of electricity per kilowatt hour is still as high as 0.516 yuan/kilowatt hour. It is not difficult to imagine why there is still not much power on the power generation side to actively build energy storage systems.

What is the original CAPEX of an electrochemical energy storage?

The original capex of an electrochemical energy storage includes the cost composition of the main devices such as batteries, power converters, transformers, and protection devices, which can be divided into three main parts.

How much does energy storage cost per kilowatt hour?

Because they couldn't pay off their debts and couldn't make ends meet, they would rather dispose of the excess electricity that was not used up. Nowadays, the cost of energy storage systems per kilowatt hour is less than 0.2 yuan/kilowatt hour. Will the construction of energy storage on the power generation side also usher in a beautiful spring?
