

How to extend the lifespan of a solar battery system

How long do solar batteries last?

The life expectancy of a solar battery depends on several factors--what kind of battery you have, how you use it, where it's stored, and how well it's maintained. While lead-acid batteries may only last a few years, lithium options can easily reach 10 to 15 years or more with proper care.

How can businesses extend the lifespan of solar batteries?

Prioritising regular maintenance, choosing the right battery technology, and implementing smart usage strategies are key steps in extending the lifespan of solar batteries. By taking these proactive measures, businesses can not only achieve greater energy efficiency and cost savings but also contribute to a more sustainable future.

How to prolong battery life?

This not only helps in maximising the battery's efficiency but also plays a pivotal role in extending its overall lifespan. **Avoid Deep Discharges:** Deep discharging can significantly reduce battery lifespan. Aim to keep the state of charge (SOC) between 20% and 80% to minimise stress on the battery cells.

How long does a battery last?

Lead-acid batteries (flooded or sealed): These are the most traditional type and also the shortest-lived, typically lasting 3 to 7 years. They're more affordable upfront but require regular maintenance and don't hold up as well over time. When people talk about battery lifespan, they're often referring to "cycle life."

How long do lithium ion batteries last?

On average, they last between 10 to 15 years. They require minimal maintenance and have a higher cycle life, making them suitable for both residential and commercial applications. **High Energy Density and Efficiency:** Lithium-ion batteries excel in energy density compared to traditional battery chemistries.

How do I get the most value out of my solar battery?

If you want to get the most value out of your solar battery, here are a few tips to help extend its life: Choose the right battery for your needs. Lithium batteries may cost more upfront but last much longer than lead-acid options. Avoid deep discharges when possible. Using only part of your battery's capacity reduces strain and increases lifespan.
