

# How to install the universal power storage pack for electric vehicles

Can a powerpack be installed on a de-energized system?

Because the door is interlocked with the Enable circuit of the inverter block, cable harness installation and maintenance can only be done on a de-energized system. Tesla provides a wireway to allow cable management between Powerpacks, and from the Powerpacks to the DC Combiner Panel.

What are the safety requirements for a powerpack system?

Service personnel must wear safety glasses and gloves with a minimum voltage rating of 750 VDC, Class 00 per ASTM D120 and IEC EN60903 standards. The Powerpack System currently uses a third party PCS. Refer to Dynapower's 250kW/kVA Power Conversion System Installation Manual.

Can a powerpack system be connected to an inverter?

The Powerpack System can only be connected to inverters with power ratings below or equal to 250 kW. The PCS includes an AC circuit breaker and DC disconnect switch. Both are accessible from the front of the unit and can be locked in either the open or closed position (Figure 6).

How do I install a powerpack?

Begin installation at the Powerpacks adjacent to the DC Combiner Panel, outlined in green (Figure 20). Use the Tesla wireway to confirm the final location of the Powerpacks adjacent to the DC Combiner Panel before anchoring the DC Combiner Panel. After the Powerpacks outlined in green are set in their final location, drill all anchor holes.

What information is included in the Tesla Powerpack system manual?

This manual contains important information for the Tesla Powerpack System that must be followed during installation and maintenance of the system. WARNING indicates a hazardous situation which, if not avoided, could result in injury or death. CAUTION indicates a hazardous situation which, if not avoided, could result in damage to the equipment.

Does the powerpack system use a third party PCs?

The Powerpack System currently uses a third party PCS. Refer to Dynapower's 250kW/kVA Power Conversion System Installation Manual. The conductors between the DC Combiner Panel and the PCS shall be at least three (3) sets, each with (2) 500kCMIL 90 &#176;C copper wire, and (1) equipment ground conductor per conduit.
